GeoSmart Solar Spinner #Giveaway

The [GeoSmart Geoshpere](#) is a building kit unlike any other I've ever seen (which since I have four children, is really saying something). Why? Because it's made of magnets and that takes the building to a whole different level.

No longer do you have to worry about pieces coming apart after your child has put together a masterpiece, unless of course you want to take it apart, because the magnets hold everything snugly in place. The magnetic pieces are wrapped twice in colorful plastic so you don't see them, but they really do hold together nicely (but not so strong of an attraction as to hurt little fingers!). These are larger pieces too, just right for children ages 5+

My son is 9-years-old and he had a blast building with these. The angular structures allow children to create 3D shapes and forms that easily allow you to sneak in a little geometry lesson. Who doesn't love to get a little math in here and there when they can, when it comes to teaching their kids? These magnetic kits in fact, encourage all aspects of STEM learning, so children will be soaking up all kinds of knowledge without

even knowing they're doing so. Easy learning is the best learning!

You can open each piece like a little door too, which makes creating buildings fun (stick an action figure or little doll in there, and watch play time be extended even longer). My son completed the set above, and put the spinner on top. Ideally, it should go on the bottom, but if you flip it upside down, besides it then being top-heavy it will still spin! A lesson I learned that day too. :)

This is designed for children ages 5+ and it, along with any of the other kits (they come in many different sizes and shapes) would make an excellent holiday gift giving item for the holidays. You can learn more by visiting the Amazon website, the [GeoSmart website](#) and/or visiting them on their social media accounts.
