

GeoSmart Magnetic Construction Sets Are A Holiday Hit

My son is 7 years old and loves anything that has to do with science and technology. He especially loves building, constructing, and putting things together to make his own creations with magnetic construction sets. The more pieces he has to build with the better. [GeoSmart](#), the future of magnetic play, has introduced a universe of building fun perfect for the holidays and we were lucky enough to review one of their new holiday hits!

GeoSmart Construction Sets

The [GeoSmart Lunar Rover](#) is a 30-piece magnetic construction set that features 5 different geometric shapes and wheels that bring movement to each construction. This set did not include instructions, but my son eagerly and quickly created the design on the cover just by looking at the picture. The pieces easily connected to each other with a strong and sturdy hold. Each magnet is encased twice to ensure the building piece and not the magnet will be visible to young fingers. This sets a high bar for safety in magnetic construction toys. He loves that his creations can move on the wheels and with his creativity and imagination, the possibilities are endless.

GeoSmart has so many fun sets for your kids to explore. I know the [Alien Creatures](#) set is on my sons holiday wish list. He cannot get enough of his Lunar Rover set and wants more pieces to add to his collection.

Purchase:

Online shoppers can look to [Amazon.com](#) for the complete GeoSmart product line and get it in plenty of time for the holidays! Every GeoSmart kit promises:

- STEM-focused magnetic construction
- a patented double-locking system for ultimate safety
