

GEOSMART IS A GREAT MAGNETIC TOY FOR KIDS! GIVEAWAY (US) 11/30

You know what makes a toy great to me? As a mom to four, I appreciate toys that take up minimal space. Many of the really cool looking toys take up so much that they are impractical. With four kids, we have to monitor closely the amount of space dedicated to toys. I also love it when a toy is battery free. And when a toy is quiet. With our kids, a cat and dog we always have noise in the house. Quiet toys are definitely a winner! But finding a toy that parents appreciate and kids actually enjoy playing with can be challenging. I was sent this [GeoSmart toy](#) for our boys to try out!

This toy hits all the marks and is a great magnet toy for kids! This [Lunar Rover from GeoSmart](#) takes up minimal space, requires no batteries, makes no noise and the kids LOVE it! And I mean love it!

They build the Lunar Rover but also can make their own configurations as well. They have built cars, planes, buildings and some things they imagined and there are really no words for. My husband enjoys sitting down and playing with these as well. And you can see how well they stack together for easy storage.

If you are looking for a great magnetic toy for kids, look no further than GeoSmart! They have a whole line of great products.
